

Client Information

<i>Client Name</i>	Test Client
<i>Date of birth (age)</i>	23 March 1980 (37)

Assessment Information

<i>Assessment</i>	Metacognition Questionnaire-30 (MCQ-30)
<i>Date administered</i>	18 April 2017
<i>Assessor</i>	Mr Brendan OShea
<i>Time taken</i>	0 minutes 25 seconds

Results

	Raw Score	Percentile
Total Score	99	100
(Lack of) Cognitive Confidence	18	98.2
Positive Beliefs About Worry	22	100
Cognitive Self-Consciousness	22	98.7
Negative Beliefs About Uncontrollability and Danger	18	98.5
Need To Control Thoughts	19	100

Scoring and Interpretation Information

Subscale scores range from 6 to 24, and total scores range from 30 to 120, with higher scores indicating higher levels of unhelpful metacognitions (for example, high scores on "cognitive confidence" indicates distrust of memory and other unhelpful beliefs about their cognition). Results are also presented as percentiles based on a normative community sample (Wells & Cartwright-Hatton, 2004).

Subscales are calculated by summing the following items:

- (Lack of) Cognitive Confidence: 8, 14, 17, 24, 26 and 29
- Positive Beliefs about Worry: 1, 7, 10, 19, 23 and 28
- Cognitive Self-Consciousness: 3, 5, 12, 16, 18 and 30
- Negative Beliefs about Uncontrollability and Danger: 2, 4, 9, 11, 15 and 21
- Need to Control Thoughts: 6, 13, 20, 22, 25 and 27

Client Responses

		Do not agree	Agree slightly	Agree moderately	Agree very much
1	Worrying helps me to avoid problems in the future	1	2	3	4
2	My worrying is dangerous for me	1	2	3	4
