Scoring and Interpretation Information

A Total Anxiety Scale score (sum of the 5 anxiety subscales) and a Total Internalizing Scale score (sum of all 6 subscales) are derived, with higher scores indicating increased symptom severity. In addition, items are summed to obtain a total score for each of the six subscales. Subscale scores are converted into percentiles, based on age, compared to the Australian community sample (de Ross et al., 2002). A percentile score of 50 represents average levels of symptoms compared to age related peers, whereas a percentile above, for example, the 90th percentile indicates high levels of symptoms.

Sub-scales are computed by summing the following items:

Separation Anxiety: items 5, 9, 17, 18, 33, 45, 46

Social Phobia: items 4, 7, 8, 12, 20, 30, 32, 38, 43

Generalized Anxiety: items 1, 13, 22, 27, 35, 37

Panic Disorder: items 3, 14, 24, 26, 28, 34, 36, 39, 41

Obsessive-Compulsive: items 10, 16, 23, 31, 42, 44

Major Depression: items 2, 6, 11, 15, 19, 21, 25, 29, 40, 47

Client Responses

		Never	Sometimes	Often	Always
1	I worry about things	0	1	2	3
2	I feel sad or empty	0	1	2	3
3	When I have a problem, I get a funny feeling in my stomach	0	1	2	3
